**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of group II, claims 6-10, in the reply filed on 3/14/08 is acknowledged.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Höhn et al. (US 6,277,301, newly cited, hereinafter Höhn) and in view of Suzuki et al. (JP 2003327961, previously cited, hereinafter, Suzuki.)

In regard to claim 6, Höhn, in figs. 1-5, discloses a method of manufacturing a white light emitting diode 1, comprising a resin layer including phosphor in the potting composition 5 to convert blue light into yellow light, provided on a blue light emitting diode, the method comprising a step of forming the phosphor layer comprising an inorganic compound containing a phosphor, col. 3, lines 40-45 and col. 4, lines 23-29. However, Höhn does not disclose the method comprising a step of forming the phosphor layer via an aerosol deposition method.

As previously mentioned, Suzuki discloses an analogous method including a step of forming an inorganic phosphor compound via liquid phase or a spray pyrolysis

(aerosol). At the time the invention was made, it would have been obvious to a person having ordinary skill in the art to use the aerosol method teaching of Suzuki in the method of manufacturing white light LED of Chua, because it would have provided an inorganic phosphor layer having excellent dispersion stability and emission characteristics as taught by Suzuki, see abstract.

In regard to claims 7-9, the phosphor is an inorganic compound, and the oxide is selected from Aluminum, for example. See also, col. 4, lines 25-30.

#### ***Response to Arguments***

4. Applicant's arguments with respect to claims 6-10 have been considered but are moot in view of the new ground(s) of rejection.
